## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to new claims 19-24 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 112***

2. Claims 19-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The addition of "a perforated core plate" seems to be new matter.

3. Claims 20-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 20, it is unclear how the active material in step (d) can be removed after the step of applying a solvent is accomplished.

Claim 23 is rejected because the solvent step discussed should be step (c) and not step (d).

Claim 24 is rejected because it is still unclear what is meant by step (c) attaching the solvent to the dried electrode.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Oguma et al. (JP 8-190930, abstract) teaches a negative plate prepared by applying slurry comprising hydrogen storage alloy powder, a binder and water to a perforated steel plate; drying the slurry, then pressing is used. Substrate exposed parts are formed on both sides of the negative plate.
